

Banking application

In my application there are total 5 services

Customer Service(9002)

Account Service(9003),

Service Discovery(8761),

Api Gateway(9004),

Config Server(9196)

I have one repo on GitHub and on that repo I have created one file i.e. application.properties.

In application.properties I have added the eureka configuration

Customer Service

For adding Customer

localhost:9002/customers -Post Mapping

For getting All Customer

localhost:9002/customers – Get Mapping

For getting Single Customer

localhost:9002/customers/{customerId} -Get Mapping

I'm sending the customerId in path Variable

For Deleting Customer

localhost:8084/customers/{customerId} - Delete Mapping

Account Service

For Creating account

localhost:9003/accounts/create -Post Mapping

For adding Money

localhost:9003/accounts/{accountId}/add-money -Post Mapping

For Withdraw the amount

localhost:9003/accounts/{accountId}/withdraw-money -Post Mapping

For getting Account Details

localhost:9003/accounts/{accountId} -Get Mapping

For deleting account

localhost:9003/accounts/account-delete/{accountId} – Delete Mapping
